People making choices: the support needs and preferences of people with psychosocial disability

Dr Lisa Brophy, Senior Research Fellow, The Centre for Mental Health, Melbourne School of Population & Global Health, University of Melbourne & Director of Research, Mind Australia
Acknowledgements

• Ms Annie Bruxner – co-researcher
• Dr Erin Wilson – co-researcher Deakin University
• Michael Stylianou & Nadine Cocks – consumer researchers
• Penny Mitchell – research assistance
• Project Reference Group members
• Consumer reference and advisory groups
• All participants and people who helped with the development, implementation and success of this research project.

This project was funded by a generous grant from Mind Australia
Key messages

• In alignment with the NDIS Act 2013, literature, policy and recovery this research had strong involvement of consumers and relied on their perspective

• This puts these findings in a unique position

• Important for services and government to understand consumer priorities and preferences
Research background

• Aim to:

– understand more about the support needs and preferences of individuals with a psychosocial disability
– adhere to the legislative and policy shift towards increased consumer choice and control
– involvement of consumers in research in order to give people with psychosocial disability the opportunity to have a voice in stating their preferences for support.
Overall Research Question

When given a choice and based on their personal preferences, what supports do people with psychosocial disability think they need to have a ‘good life’?

And,

How would they allocate their individualised funding packages across life goals, what decisions would they make about support services, and who would they rely on to assist in making decisions and choices?
Recovery focused research methods

“CHIME” Leamy et al, 2011
• Involvement of consumer reference and advisory groups (Mind Australia and Barwon Health)

• Project advisory group

• Interviews co-conducted by consumer researchers

“These methods …..require a collaborative approach to involving people with experience of the phenomena of focus to participate as partners throughout all stages of a [research] study.” Davidson, 2010
Our 41 participants

Gender
24 males
Average age
45 years

Living arrangements
Living alone: 21
Supported housing: 8
With a family member: 11
Boarder: 1

Income source
Disability Support
Pension: 37

Employment status
Full time: 0
Casual or part-time: 18
Unemployed: 23
“A mental health issue that affects people’s daily activities such as socialising or interacting with others in a social setting, learning or self-care, or their capacity to fully participate in society”.

(based on the National Mental Health Consumer and Carer Forum and NDIS rules)

Thirty-eight participants (92.7%) agreed that they had a psychosocial disability (and agreed with the definition provided).
You see with this NDIS that I don’t know a lot about, I’m [hoping] that I can keep some of them [paid support staff]. I don’t know if I’ll be eligible. I don’t know enough to know. I hope I am eligible… But it scares me when they’re gone. That’s something I really fear. Because then I’ll be back to where I was and I’m not quite ready for that. (Participant)
Fluctuations

</tr>
</tbody>
</table>

*Well I think it will have less impact over time but if my mother dies or I experience some tragedy like a car accident then it [can] recur an episode of schizophrenia. So I’m expecting things will continue to improve as they have done in the last two years but I still need support…because it took 30 years out of my life…I lost 30 years. (Participant)*
Emergent themes

- Contributing and being valued
- Meaning and enjoyment in life
- Recovery
- Peace, freedom and safety, and
- Interpersonal connections.

Participant definition

To have the ability to live each day with purpose and dignity, to be treated with respect, and not seen as someone who’s very incapacitated (Participant).
Prioritisation of 14 ‘good life’ domains  N=41

Figure 2. Percentage of people who said each goal would be ranked in the top five good life goals.
Top 5 Good Life Goals

68% Health
61% Economic
59% Social connection
37% Support person
34% Housing
32% Personal life

Top ‘good life’ goals according to participants’ prioritisation of each goal being in their Top 5.
What does health mean to you?

- Mental Health
- Physical Health
- Integrated view of health/well-being
Supports for health

- Peer support
- Treatment options
- Integrated health treatment
- Doctors and medication
- Psychologist, counseling and psychotherapy
- Financial support to subsidise health care
- Group based activities
- Personal carer
- Prevention strategies

Right medication, professional mental and medical help to alleviate symptoms, reduce cholesterol, reduce weight, have a healthy life, live long, prosper and do stuff (Participant).
What are your economic goals?

- Training, education and skills
- Financial stability or money
- Work and employment
Supports for Economic Security

- Training and skills development
- Employment Assistance
- Financial support and stability

I was thinking of getting a mentor and support worker through [CMHSS] but that was more for the economic sort of thing to help me...I was thinking of getting them to help with budgeting, getting budgeting up to scratch so I can save money and actually pay off my debts and such. So some sort of economic support would be good. (Participant)
What does social connection mean to you?

- Lack of social connection
- Friends
- Acceptance
Supports for Social Connection

- Peer support and peer support groups
- Help to access recreational activities
- Direct assistance from a support person
- Home-visiting & help with domestic tasks
- Drop in centres
- Financial support for community and sporting activities

...just connecting with people is probably the main thing. When you connect with someone else who understands you and you look in their eye “You know what I’m talking about right now”, it’s great. But you go and talk to other people and they just go “You should do this, you should do that”. You’re not even going to listen to them because they’re just doing it from what they’ve learnt in books and all that, so that’s why I reckon peer support is the way to go (Participant)
What does housing mean to you?

- Safe housing
- Quality of supported housing
- Stable housing
Supports for housing

• Financial advice
• Help with moving and relocating
• Having the type of housing that meets the person’s needs

Something in my age group … my era, something that I can rent. I don’t know if it needs to be public or private but something that I don’t have to move from, I’m a good tenant, the house is clean, I don’t have parties I don’t even have visitors – except my workers. There’s just me and I want somewhere that I feel safe and comfortable and happy  (Participant)
What do personal relationships mean to you?

- Intimate relationships
- Family
Supports for personal life

- Funding to help achieve intimate relationships
- Family relationships supports
- Information for family members
- Direct support for family members
- Reducing reliance on family members
- Financial support to connect with family
Overall barriers to achieving good life goals

HEALTH

• There is no physical possible way I am healthy, I am not. I’d like to lose a stack of weight. I have diabetes and a whole lot of other health related issues that come along with mental illness. You don’t feel like going for a walk but you know you should (Participant).

ECONOMIC

• I have shortcomings related to the years that I had schizophrenia and especially lack of work experience which in this country is very difficult…I’m still suffering the effects of a lack of experience in the professional work force and poverty, relative poverty by Australian standards. (Participant)
Overall enablers to achieving good life goals

HOUSING

- I started living there [at the backpackers] for a big gap at one point because I was homeless and then they sorted of started having me there [working too], for about four or five years. (Participant)

PERSONAL RELATIONSHIPS

- Socially I just need time to meet someone and if I meet a girl I need them not to judge on face value or what’s in my bank balance or whatever. I just need time and not judged on how old I am, it’s not how old you are. (Participant)
Support person: A Key Enabler

Knowledge:
- Understanding of mental illness and psychosocial disability
- Understanding of the mental health ‘system’

Roles:
- Advocacy
- Motivation
- Encourager
- Coach
- Mentor
- Navigator
- Someone to talk to
- Educator

Skills
- Good communication and interpersonal skills
- Care coordination
- Personalised caring
Characteristics

• Respectful and flexible
• Responsive
• Understanding
• Compassionate
• Compassionate
• Inviting and hospitable

Tasks

• Home visiting
• Practical assistance
• Supporting decision making
• Assistance with social connection
• Work with family and friends

Types of support person

• Peer support worker
• Someone independent
• Family
• Friends
• In-home worker
• Case worker
• Housing officer
Family

- Family was not only an enabler but also a main life goal.

- It has not previously been included in personal recovery frameworks (such as CHIME) or assessments and other scales/measurements (such as CANSAS).

- Innovative communication may assist in discussions to identify strengths and goals, and may lend to improving upon current favoured/emerging approaches.
The value of support from family and carers in achieving a good life

- [W]hen I’d get out of hospital...when I was depressed I’d often stay at my sister’s on the couch and so they ended up buying a house with a bedroom for me… (Participant)
- The only reason I got a job with [him] is because he’s a friend of the family and he just wanted to give me a go. (Participant)
- [O]h family definitely, family and I see that people who have schizophrenia [who] don’t have family around them or takes drugs or whatever end up having much more long term severe cases of illness. My mother’s always been really supportive, looks after me, a good mother and stuff. (Participant)
- Connecting with family. I’d feel one hundred percent afterwards. (Participant)
- And my son at that time became my carer and so he did a lot of things too, as in vacuuming and cleaning and things like that. (Participant)
• Barriers to achieving priority life goals
• Almost 30% reported stigma (and/or discrimination) as impacting their lives.
• Self-stigma: internalised negative stereotypes and blaming themselves for not having accomplished more.
• 2010 Australian national survey of psychosis: 11.6% say stigma and discrimination was the most important challenge for them.
Poverty and financial issues

- Reduced ability to access health activities, sporting groups, afford membership for children to engage in extra-curricular activities, or visiting family members and family gatherings.
- Even if the opportunity for engaging in activities is made available, many may not afford to participate.

I didn’t get invited [to a family member’s wedding]. I didn’t get invited because I’m on the DSP and I can’t afford to spend a night in [city venue] you know. (Participant)
Do you think you would need support with decision making?

- 27% ($n = 11$) – Yes
- 68% ($n = 28$) – No
- 5% ($n = 2$) – Maybe
Support with decision making

Would you use any of your funding to *purchase* decision making support?

- 75.6%. \((n = 31)\) = YES
• Challenges:
  – Fluctuating needs
  – Poverty
  – Gaps in current ‘mainstream’ service provision (health housing and education)
  – Minimal informal supports, loneliness and isolation
  – Skilled support workers
  – Stigma and discrimination
  – Supporting decision making
Key findings

– There is value in using collaborative, participatory and recovery focused methods (with a focus on personal needs and preferences) to create a space to learn about unexpected personal recovery needs, enablers and support preferences

– NDIS needs also to recognise the social determinants of disability eg poverty, stigma and discrimination, and to consider the intersection with how “reasonable and necessary” supports are defined.

– For the NDIS to be cost efficient and meet its overall objectives it may need to continue to develop innovative ways to have these conversations.
In summary

• People with psychosocial disability in this project prioritised health, economic security, social connection, housing & personal relationships in achieving a good life
• They valued having a skilled support person plus peer & family support
• Barriers included poverty, stigma & discrimination
Thank you – Questions?
